                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a Porphyromonas gingivalis arginine-specific proteinase known as Arg-gingipain/gingipain-2 amino acid sequence. Gingipain-2 consists or a 50kD protease component non-covalently associated with a 44kD haemagglutinin component. The proteinase is stimulated by glycine containing peptides and glycine analogues. It is inhibited by cysteine protease group specific inhibitors. The protease inhibited by cysteine protease group specific inhibitors. The protease inflammatory response and tissue damage caused by P. gingivalis in periodontal disease. It can also be used to screen for agents that modulate Arg-gingipain proteinase activity inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3 PNPNPNPNPGTTTLSESFENGIPASWKTIDADGDGNNWTTTPPPGGTSFAGHNSAICASS 62

Fletcher Immun. 62:5707-5707 (1994).

-1- FUNCTION: CLEAVES HUMAN COMPLEMENT COMPONENT C3. MAY ENABLE
F.GINGTIVALIS TO EVADE COMPLEMENT-MEDIATED KILLING DURING THE
IMMUNE RESPONSE. PLAYS AN IMPORTANT ROLE IN SOFT TISSUE INFECTIONS
AND IS A VIRULENCE PACTOR.

-1- SUBCELLULAR LOCATION: In membrane vesicles.
-1- SIMILARITY: Belongs to peptidase family C25.
                                                                                                                                                                                                                     ASYINFEGPQNPDNYLVTPELSLPNGGTLTFWVCAQDANYASEHYAVYASSTGNDASNFA

                                                                                                                                                        complement C3 and C5.

CATALYTIC ACTIVITY: Cleavage of proteins, including collagens and immunoglobulins, with a preference for Arg in P1, and hydrophobic residues in P2 and P3.

ENZYME REGULATION: Requires cysteine for activation and Ca(2+) and/or Mg(2+) for stabilization. It is stimulated by glycine-containing dipoptides. It is resistant to inhibition by proteinase inhuman plasma.
Biol. Chem. 267:18896-18901(1992).
- FUNCTION: Thiol protease which is believed to participate in intracellular degradation and turnover of proteins. Its proteolytic activity is a major factor in both periodontal tissue destruction and in bacterial host defense mechanisms. Activates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               30 TIDADGDGNNWTTTPPPGGTSFAGHNSAICASSASYINFEGPQNPDNYLVTPELSLPNGG

Bifunctional autolysin precursor [Includes: N-acetylmuramoyl-L-alanine amidase (EC 3.5.1.28); Mannosyl-glycoprotein endo-beta-N-acetylglucosamidase (EC 3.2.1.96)].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Foster S.J.; Submitted (APR-1995) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: ENDOHYDROIVSIS OF THE DI-N-ACETYLCHITOBIOSYL UNIT IN HIGH-MANNOSE GLYCOPEPTIDES AND GLYCOPROTEINS CONTAINING THE -[(MAN) S (GLCNAC)2] ASN STRUCTURE. ONE N-ACETYL-D-GLUCOSAMINE RESIDUE REMAINS ATTACHED TO THE PROTEIN; THE REST OF THE OLIGOSACCHARIDE IS RELEASED INTRAT.
-!-CATALYTIC ACTIVITY: Hydrolyzes the link between N-acetylmuramoyl residues and L-amino acid residues in certain bacterial cell-wall
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GATALYTIC ACTIVITY: Endohydrolysis of the di-N-acetylchitobiosyl unit in high-mannose glycopeptides and glycoproteins containing the -[Man(GloMAc)2]Ann-structure. One N-acetyl-D-cultining residue remains attached to the protein; the rest of the oligosaccharide is released intact.

SUBCELULAR LOCATION: Secreted.

FIM: UNDERGOES PROTEOLYTIC PROCESSING TO GENERATE THE TWO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EXTRACELLULAR LYTIC ENZYMES.
SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE N-ACETYLMURAMOYL-L-ALANINE AMIDASE FAMILY 2.
SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO FAMILY 73 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "A Staphylococcus aureus autolygin that has an N-acetylmuramoyl-L-alanine amidase domain and an endo-beta-N-acetylglucosaminidase domain: cloning, sequence analygis, and characterization."; Proc. Natl. Acad. Sci. U.S.A. 92:285-289(1995).

"S-layer protein gene of Lactobacillus brevis: cloning by polymerase chain reaction and determination of the nucleotide sequence.";
J. Bacteriol. 174:7419-7427(1992).
-I. FUNCTION: The S-layer is a paracrystalline mono-layered assembly of proteins which coat the surface of bacteria.
-I. SUBCELLULAR LOCATION: Cell wall. This bacterium is covered by a S-layer with tetragonal symmetry.
-I. SIMILARITY: SOME, TO THE S-LAYER PROTEIN OF L.ACIDOPHILUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB 1; Length 465;

 CenE, a member of a new family of beta-1,4-glucanases.";
Biochem. Biophys. Res. Commun. 199:1223-1228(1934).
-! FUNCTION: Hydrolyze cellohexaose to a mixture of cellotetraose,
cellotriose and cellobiose, with only a trace of glucose. It
hydrolyzed cellopentaose to cellotriose and cellobiose, and
cellotetraose to cellobiose, but it did not hydrolyze cellotriose.
Has also weak endoglucanase activity. Hydrolyzes glucosidic bonds
with inversion of anomeric configuration.
-!- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages
in celliblose and cellotetraose, releasing cellobiose from the non-
reducing ends of the chains of the chains.
-!- SIMILARITY: Contains 1 fibronectin type III domains.
-!- SIMILARITY: Contains 1 bacterial-type cellulose-binding (CBD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=93209933; PubMed=8458833; Miller R.C. "Callulose-binding polypeptides from Cellulomonas fimi: endoglucanase

"To Cennol, a family A beta-1,4-glucanase.";

"I D. Bacteriol. 175:1910-1918(193).

"I J. Bacteriol. 175:1910-1918(193).

"I J. Bacteriol. 175:1910-1918(193).

"I J. Bacteriol. 175:1910-1918(193).

"I J. Bacteriol. 175:1910-1918(193).

"I J. Bacteriol. Inkages of cellulose and barley beta-glucosidic linkages of microcrystalline cellulose and barley beta-glucan. Has also weak endoglucanase activity. Hydrolyses glucosidic bonds with inversion of anomeric configuration of 1,4-beta-D-glucosidic linkages

"I J. Bacteriol Service and barley beta-glucosidic linkages in cellulose and cellotetraose, releasing cellobiose from the non-reducing ends of the chains.

"I SIMILARITY: Contains 1 bacterial-type cellulose-binding (CBD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0157.H7 and genomic comparison with a laboratory strain K-12.";
DNA Res. 8:11-22(2001).
1- SIMILARITY: Contains 16 Big-1 domains.
-!- SIMILARITY: Belongs to the intimin/invasin family.
-!- CAUTION: Ref. 2 sequence differs from that shown due to a frameshift in position 1315.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   58; Mismatches 199; Indels 106;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                     US-08-570-311-20
